INDEX

OUTER SHELL

Pittards® goat Armortan® WR100X

This leather structure is constructed from microscopic fibrils, which are randomly intertwined to form fibre bundles. Armortan® encases these fibril bundles with microscopic, ceramic armour-plates, which are more resistant to abrasion. This increases the durability of the leather by preventing wear on contact surfaces and materials. The leather has also been processed specifically to improve breathability and overall comfort.

Pittards® goat Digital™ WR100X

The Pittards® WR100X tanning process provides excellent water repellence and very low water-uptake, for greater insulation benefits. The unique Pittards® water-resistant technology limits water-uptake into the fibre structure. This guarantees excellent grip and sensitivity, even under the most adverse conditions. The result is optimum grip and maximum control, ride after ride.

Pittards® goat microvent Digital™ WR100X

Microvent is the latest three-dimensional texturing technique from Pittards®, available on sports-grain leathers. Microvent offers a significant improvement in breathability over standard performance leathers, providing enhanced comfort. Microvent combines this unique breathability with all the technical characteristics that Pittards WR100X leather is known for: low water-uptake, perspiration resistance, great grip, quick drying, and enduring softness.

Embo cowhide

Corrected-grain leather is any top-grain leather that has had its surfaces sanded or buffed in order to remove imperfections on the surface. The imperfections are corrected and an artificial grain applied (through embossing), for rugged, long-lasting wear.

Monaco Performance cowhide

This top-grain leather not only has had its surfaces sanded to correct imperfections, it has been reinforced to up its performance factor for riding on the track or street. Long-lasting and extremely protective.

Mirage Performance cowhide

Like the Embo and Monaco versions, Mirage Performance cowhide is a corrected-grain leather with a smooth surface, free of imperfections. Tough and durable, it is perfect for any type of riding.

Kangaroo leather

Compared with cowhide, kangaroo leather is known specifically for its lighter weight and higher abrasion resistance. This provides greater protection in case of a fall on the roadway.

Goatskin

Tanned leather made from goatskin is considered extremely durable, and is often used for gloves and other products that require a soft hide.

Full grain cowhide

Full grain leather is among the best quality leather you can buy. It can be made from a variety of different animal hides, but most usually is cowhide. Full grain leather is desirable because of its excellent breathability and durability. Additionally, with full grain leather, the hides of the animal need not be treated significantly. Like a pair of jeans, full grain leather clothing actually gets more comfortable the more you wear it, becoming softer and, some say, even more attractive as it ages.

Augustini full grain cowhide

This high-quality, full grain cowhide is extremely durable and breathable, providing a combination of comfort and protection on any length of ride.

Pampas cowhide (PU coated)

The Pampas cowhide has all the comfort and protection of cowhide, but adds a PU coat for excellent water repellence and weatherproofing. Makes for comfortable riding in wet weather conditions.

Karvin cowhide (PU coated)

The Karvin cowhide has all the comfort and protection of cowhide, but adds a PU finish on top for water repellence and weatherproofing. Makes for comfortable riding in wet weather conditions.
